

INTRODUCTION

Sensus Metering Systems

Sensus Metering Systems is the world's largest water meter manufacturer and a leading provider of gas and electric meters. The impact of their high-value products extends nearly all over the globe wherever there is a need for accurate resources metering.

Residential Water Meters - Sensus offers the most complete line of residential and small commercial meters to meet virtually any application for water measurement, registration and meter data collection. Models include SR, SRII and PMM.

SRH Compound Meters - Offer the widest flow range capability of any meter from very low to very high flows from a single meter.

Turbo Meters - For accurate measurement when moderate to high flows are the norm.

Mainline Propeller Meters - Used for when the objective of metering is accountability rather than revenue.

ICE Register - All Sensus meters are available with the ICE Register, advanced non-contact encoder technology that enables all types of automated data collection from TouchRead to Fixed Base Radio Read.

TouchRead - Eliminate errors and improve access by reading meters electronically with the touch of a button.

RadioRead - Increase productivity and safety by reading meters at a distance using RF radio technology.

FlexNet Fixed Base - Add water system management capability through increased data collection and reporting via the FlexNet wireless fixed network.
