

PACKAGED TREATMENT PLANTS

Corix Water Systems

Corix Water Systems, a BC based company with over 35 years of experience in the water industry, provides economical solutions to satisfy the most demanding water and wastewater treatment requirements.

Backed by a team of professional Engineers, CAD Designers and Instrumentation Technicians, we design and manufacture packaged treatment plants that are factory assembled, plumbed, wired, programmed and tested prior to shipment and only require water or water and influent plus electrical connection on site to be operational.

With more than 400 plants commissioned in North America and abroad, utilizing proven and reliable technology, our plants provide high quality potable water or are achieving high quality effluent, whichever treatment system is being employed.

Why Packaged Treatment Plants?

- Cost savings of up to 45% over conventional in-situ construction
- Lower installation cost
- Reduced timelines due to unified design and construction phase
- Modular construction allows for future expansion
- Singular performance guarantee

Not only will Corix Water Systems help in the selection and design of the plant(s), but we can also support you by offering commissioning, training, operational and maintenance services. We would also entertain owning your water utility systems, which would remove all liabilities, responsibilities and risk from you and your organization, leaving Corix Water Systems to deal and comply with all government requirements and auditing processes.
